

TaurEye - Self-Hosting Transition

Move from Cloud (Oracle VM + Cloud Supabase) to a self-hosted, fully-Dockerised Azure VM.

Updated 26 Jun 2026 | Host: Azure VM (Docker) | taureye.com / api.taureye.com

Latest: P1 accounts MIGRATED - 11 users + identities + wallet (26 credit txns) restored into self-host; nightly cron CONFIRMED (ran 2026-06-25, status ok, 3m23s). Note: most old accounts are Google sign-ups (no password), so they can only log in once Google OAuth is enabled (P2) - the migration itself is verified healthy.

Snapshot: 14 done · 20 pending · 0 decisions

Legend: Done Pending Blocked

Completed

Status	Item	Detail
Done	Azure VM + Docker stack	web + dataengine + scheduler and the full Supabase stack run as containers.
Done	HTTPS on site + API	taureye.com / www and api.taureye.com on Let's Encrypt via host nginx.
Done	SPA on HTTPS API	web built with VITE_SUPABASE_URL=https://api.taureye.com (mixed-content cleared).
Done	Email auth working	email/password signup + login functional (autoconfirm on until SMTP set).
Done	Price history rebuilt (P0)	on-VM backfill: 3.0M rows / 739 trading days; RELIANCE 739 candles.
Done	Data verified + live (P0)	bundle served at taureye.com/data; indicators/charts/breadth live.
Done	BSE price policy (P0)	keep the OFFICIAL exchange close (ClsPric) for all scrips.
Done	Accounts migrated (P1)	11 users + auth.identities + public.* (profiles, 26 credit txns) into self-host.
Done	Nightly cron confirmed (P1)	ofelia ran nightly+export 2026-06-25 21:00 IST, status ok - freshness self-sustaining.
Done	Mobile HTTPS (code)	capacitor.config: cleartext + allowMixedContent disabled (applies on next APK build).
Done	nginx headers config	deploy/azure/nginx-security-headers.conf committed (include at host edge).
Done	VM helper + audit scripts	reexport / migrate-supabase / harden / status / secaudit in deploy/azure.

P2 - Auth completeness (now the key unblock - most accounts are Google)

Status	Item	Detail
Pending	Enable Google OAuth	Google Cloud OAuth client + GOTRUE_EXTERNAL_GOOGLE_* via auth override + restart. Unblocks the migrated Google accounts.

Status	Item	Detail
Pending	Fix proxy X-Forwarded-Proto	host nginx must pass https (logs show http) so OAuth redirects/cookies are correct.
Pending	Mailer/redirect hosts	add api.taureye.com to GOTRUE_MAILER_EXTERNAL_HOSTS; SITE_URL + ADDITIONAL_REDIRECT_URLS=https://taureye.com/**.
Pending	SMTP for auth emails	set SMTP_* in supabase-docker/.env, then disable ENABLE_EMAIL_AUTOCONFIRM.
Pending	Verify a migrated login	email/password account logs in now; Google accounts after OAuth is on.

P3 - Security hardening (tooling ready: harden.sh / secaudit.sh)

Status	Item	Detail
Pending	Rotate exposed DB password	old Supabase DB password appeared in chat - reset it (Settings -> Database).
Pending	Run secaudit.sh + external scan	run audit on the VM; nmap/SSL-Labs from outside (only 22/80/443 open).
Pending	Verify Supabase secrets not demo	JWT_SECRET / anon / service / dashboard pw must be random, not defaults.
Pending	Bind Kong (+ Postgres) to localhost	harden.sh sets 127.0.0.1; then close 8000 / 5432 in the Azure NSG.
Pending	Apply nginx security headers	include the committed snippet in each 443 server block + reload.
Pending	SSH hardening + fail2ban	harden.sh: PasswordAuthentication no / PermitRootLogin no + fail2ban.
Pending	Cert auto-renew check	certbot renew --dry-run passes.

P4 - Mobile (APK / OTA)

Status	Item	Detail
Pending	Repoint app to Azure	GitHub vars VITE_DATA_BASE/VITE_CANDLE_BASE=https://taureye.com/data + https Supabase; OTA on push.
Pending	Rebuild APK (HTTPS)	cleartext already disabled in code; a native rebuild is needed to ship it.

P5 - Ops, data quality & cutover

Status	Item	Detail
Pending	Backups	nightly pg_dump cron + Azure disk snapshots.
Pending	Managed data disk	move Postgres + spine + bundle onto a managed disk if still on the OS disk.
Pending	Fix sector heatmap	NSE sector-constituents fetch fails (JSONDecodeError) -> heatmap shows 'Unknown'.

Status	Item	Detail
Pending	End-to-end smoke test	screener, chart, AI cache, watchlist, credits.
Pending	Decommission old Oracle VM	data + accounts now live on Azure; retire after a final check.
Pending	Remove old IP hardcodes	drop 161.118.174.177 references once app is repointed.

Recommended next: P2 - enable Google OAuth (needs the Google Cloud client) to unblock the migrated Google accounts, and fix the proxy X-Forwarded-Proto to https. In parallel: P3 - rotate the exposed DB password, run harden.sh + secaudit.sh, and tighten the NSG to 22/80/443.
